## Cubis™ . Programm 830

### Cube-shaped. Comfortable. Classical and modern.

Cubis is a range of seats that matches any architectural style without competing with it. The shape of the chair with its closed side sections conveys a feeling of well-being in open-plan interiors too. The streamlined shape of the chair creates an uncluttered impression, whatever the layout. The side sections are supported by legs made of elliptical aluminium profiles with distinctive bevelled finishing elements at the top.

The firm seat upholstery ensures extreme comfort and the seat's height makes getting up easier – whatever your age. At the same time, different frame finishes and the variety of covers leave plenty of scope for different design options. And of course there are side tables available to match the upholstered furniture. Cubis always cuts a fine figure – whether in foyers and reception areas, in lobbies or as office seating for a small informal group.

Design: wiege, Klaus Franck,  
Werner Sauer

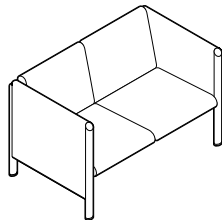

Model 831/5  
armchair with leather covering and  
bright chromium-plated frame

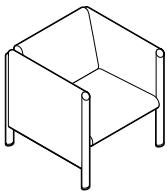

The distinctive oval aluminium frame profiles are optionally coated, clear anodized or bright chromium plated. For the covers, you can choose from the entire Wilkhahn fabric and leather collection. The square or rectangle side tables have the same type of frame. With laminate or wood-veneered finishes they can be perfectly matched with the functions and design concepts they are required for.

Top materials and careful craftsmanship guarantee durability and quality. Solid wood, beech frames that are covered and upholstered, and multi-layer upholstery with fibre fleece overlay, as well as first-class covers, combine a pleasant feeling when you sit on the chair with constant comfort. The side tables are exceptional for their characteristic oval profiles and solid panels made of birch plywood. In another words: the clear, self-contained shape, high quality and ergonomic comfort have already turned Cubis into one of today's classic pieces of furniture.
