Tubis™ . 760 range

First-class comfort. Designed to last. Very economical.

Reception and waiting areas – whether in airports, train stations or lobbies – are increasingly becoming places to gather, meeting places for business travellers and therefore calling cards for the host. Tubis is exceptional for:

- understated and high-quality design, with accessories to match different architecture and interiors in order to give interiors and furnishings a co-ordinated look;
- extreme, ergonomic comfort for a range of postures, offering relaxation and a chance to unwind, even if waiting times are long;
- simple assembly, dismantling and exchange of components and is easy to clean, so that the quality of the furniture is maintained at affordable maintenance and follow-on costs.

Two load-bearing aluminium profiles (tubes) lie at the system's core. The tubes have integrated grooves that all functional elements such as seat shells, armrests, side shelves and tables, or sliding footrests can be affixed to. Consequently, four-legged, free-standing benches with up to five single seats can just as easily be made as rows of seats that are joined at the back or around corners.

Tubis

Design: wiege, Klaus Franck,
Werner Sauer, Rainer Grabe

Model 764/62
seat and back cushion, aluminium,
silver-coated matt satin finish

Tubis bench, not upholstered. The bench, optionally with upholstery, can be sat on from both sides and invites you to take a seat, even if it is just briefly.

Compact alternative: **Tubis Gate's** frames, seat shells and side tables/shells are simpler and save around 70 mm (2³/₄") width per seat. In addition to perforated seats without upholstery, unperforated seats with exchangeable slim cushions are also available.

The way the range is designed allows changes of colour even within the benches. The footrests that can be slid to the sides, make Tubis a relaxing place to sit. With slender cushions, headrest and leather-covered footrest, Tubis fulfils even the most demanding of requirements.

Model 762 / 62
Model option **Tubis Gate** with perforated seat shell without upholstery. The compact version only requires an edge width of 530 mm (20⁷/₈") per seat.
