Wilkhahn and Sennheiser Business Communication join forces at Orgatec: TeamConnect Wireless on Wilkhahn conference tables

Bad Münster/Wedemark, October 2016. Unlike virtually any other office furniture manufacturer, Wilkhahn focused in depth at a very early stage on the relationships between communication processes, room and furniture concepts and multimedia technology. The Planning Guide for Conference and Communication Environments, Berlin, Basel, Boston 2008 is still considered a standard reference book for planning communication, collaboration and conference spaces. Since furniture usually lasts much longer than multimedia technology, Wilkhahn will present conference settings at Orgatec that are versatile and flexible to use without necessitating major changes to the table ranges. Therefore, the table solutions can be used for a range of very different purposes.

Sennheiser's TeamConnect Wireless is a powerful solution for mobile audio conferences for up to 24 people that virtually anyone can use anywhere. The goal is to harness digital telephony to encourage collaboration between teams located in different locations and to guarantee maximum flexibility in terms of room usage, numbers of attendees and table formats. With unparalleled ease of use, state-of-the-art connectivity and fast set-up times the system delivers Sennheiser's trademark high quality sound. TeamConnect Wireless is enhanced for IP telephony which includes Skype for Business, Cisco Jabber, WebEx and Go-To-Meeting.

The stylish, portable solution consists of four modules – a master and three satellites – all of which are transported in a hard-wearing case that doubles as a charging station. A DECT connection wirelessly links all the units to create a flexible system that turns almost any room or any table combination into a fully-fledged conference environment. The smart charging station is an alternative to the case with integrated charger.

In addition to top notch functionality, the system offers exceptional business class style with high quality, hard-wearing components made of glass and aluminium that complement the outstanding design of the Wilkhahn ranges perfectly. As a result, TeamConnect Wireless was presented with the Best of the Best accolade by the Red Dot Design Award 2016.
